

# E-CONTROL

WORKING FOR YOU – WHEREVER YOU NEED ENERGY.

E-CONTROL

# **EU Electricity Market integration Process: challenges ahead**

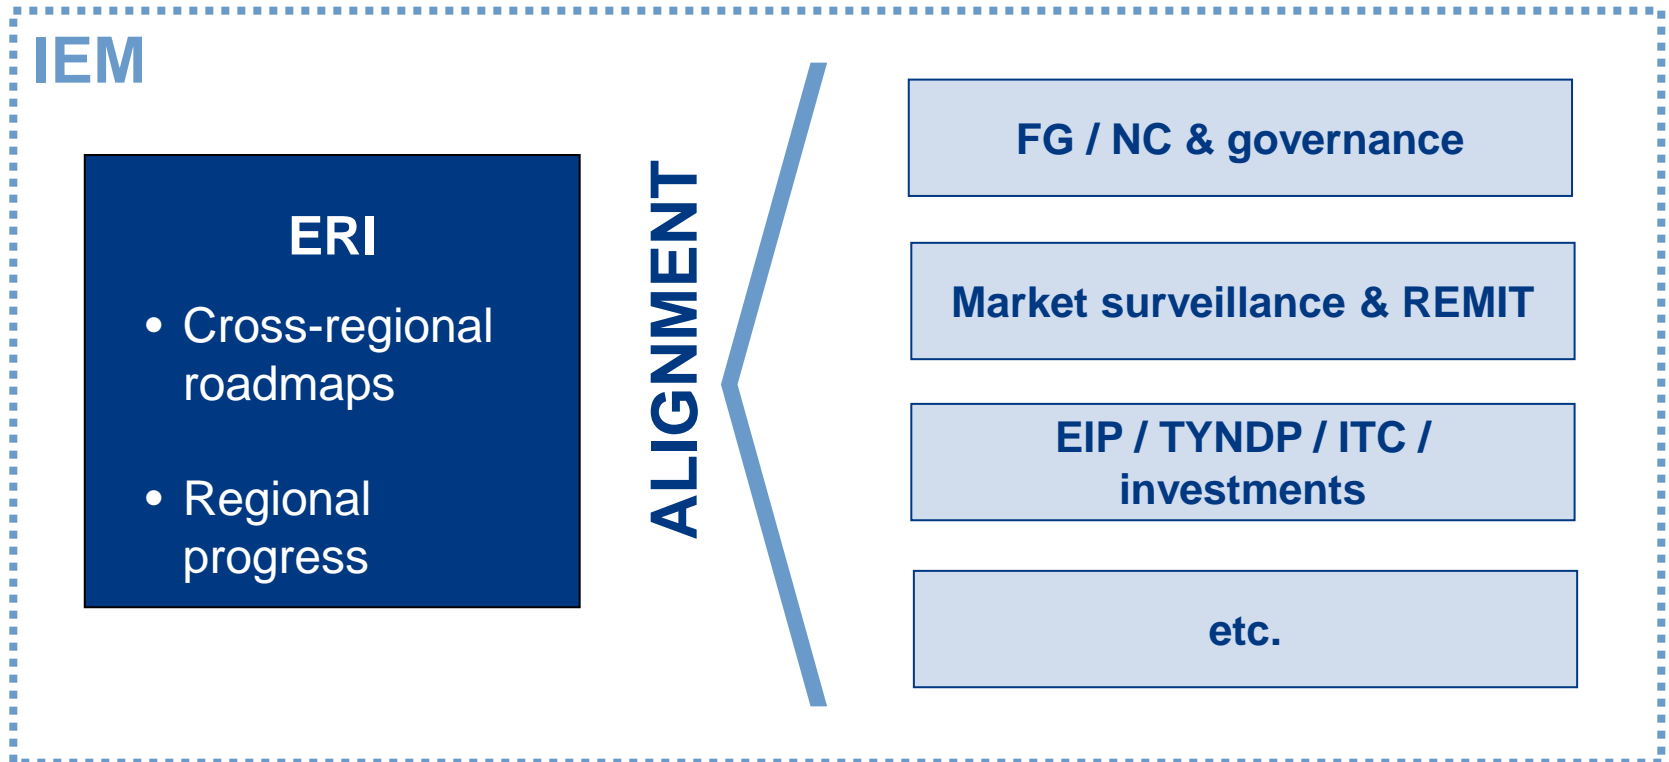

## **An Introduction**

**Sven Kaiser**  
**Workshop SEE**  
**Rome, 19 April 2013**

# The achievement of the IEM requires implementation and policy efforts

*“The internal market should be completed by 2014 so as to allow gas and electricity to flow freely.”*

European Council – 4 Februar 2011 - Conclusions Energy

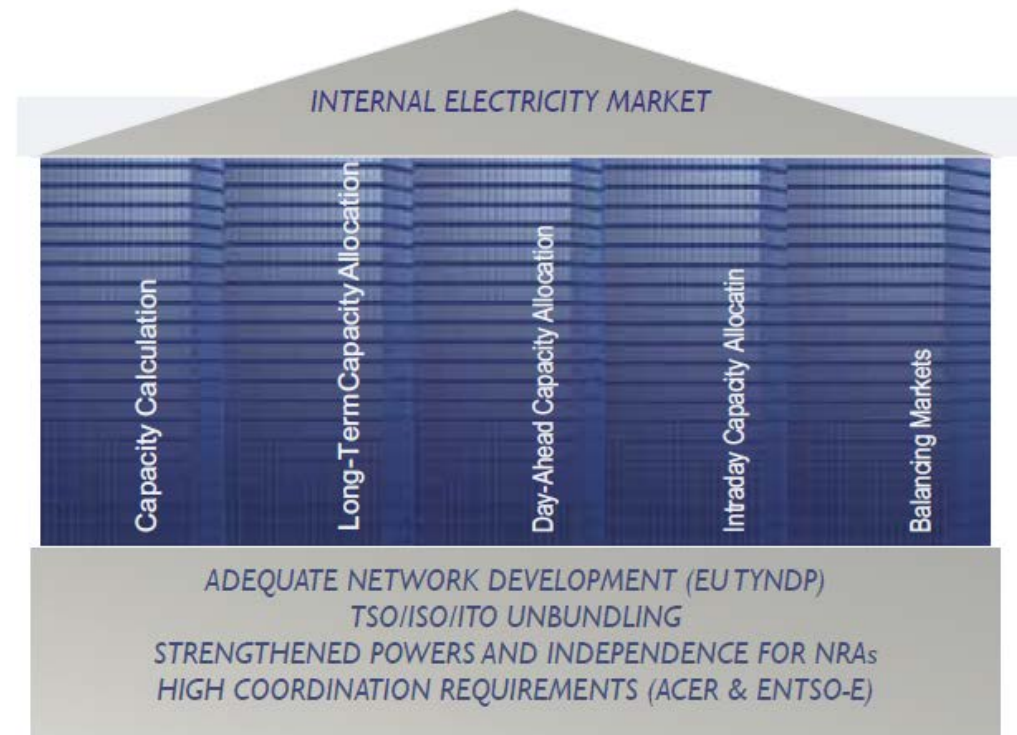

# The target model encompasses several pillars

E-CONTROL

- Timely implementation is very ambitious
- Close regional and cross-regional coordination needed
- Parallel work needed, but some elements have in reality more priority than others (e.g. DA vs. ID)

# Different phases have been achieved on different topics

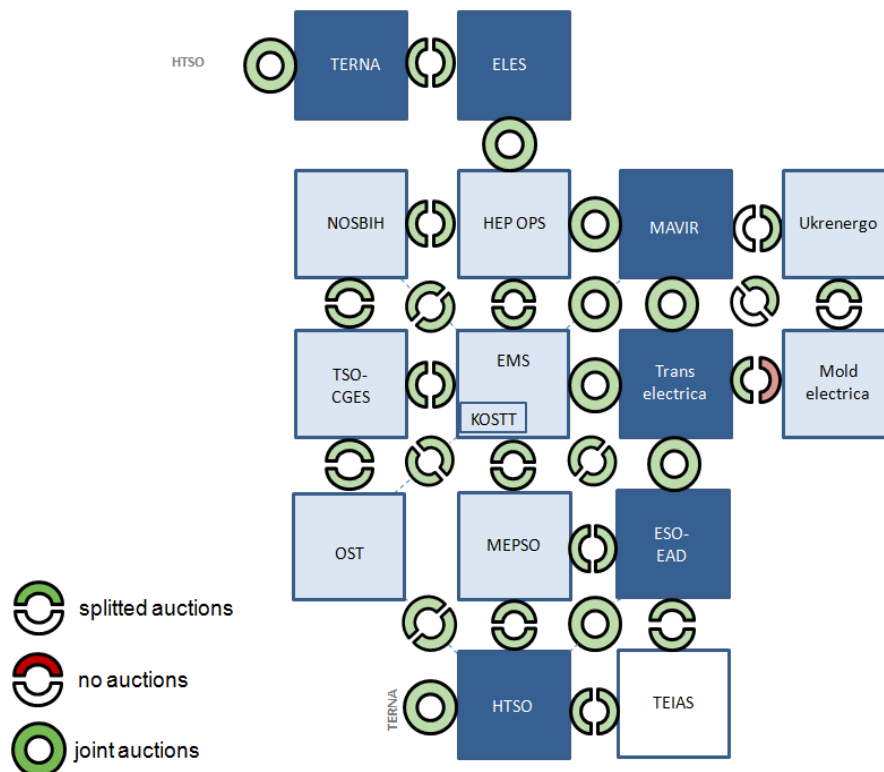

E-CONTROL

- **Day-Ahead Market Coupling:**  
NWE as a pilot – others to join
- **Intra-Day Continuous Trading:**  
IT Platform (NWE and others) in procurement – extension to be defined
- **Long Term Allocation:**  
Harmonization process for allocation rules, “Merging” of Allocation Platforms,
- **Capacity Calculation:**  
Flow-based concepts in external test in CWE and in preparation in CEE, to come in CSE
- **Balancing:**  
“Infant stage” for pilot projects

# The 8th Region is under way ...

... but further  
coordination is still  
a high priority !
